

Launching of VT220

Vipal Rubber is launching a **new drive design** recommended for medium and long haul application: the VT220. With a special compound for driving in low temperatures, this tread was developed for use in surfaces with mud and snow. **This tread has the 3PMSF certification, that proves the performance when driving in snow conditions.** The design also permits excellent water/snow/mud drainage.

See the main advantages of the new design:

Transversal grooves with ties bars providing greater support in the base of the blocks

Transversal blocks that allow excellent traction power

Deep sipes for better tread blocks movement, enabling the self-cleaning of the tread and better grip in snow conditions

ABOUT RUBBER

January/2017

VT220 means:

V	Vipal tread
T	Recommended for use in drive axles
220	Hundreds 100 and 200 represent treads for use on highways and paved streets on radial tires

Indicated application

Highway

Snow

Optional application

Regional

Construction

Radial

Mud and snow

Alpine symbol

Axle

Traction

Vehicles

Medium duty truck

Single axle tractor truck

Tandem axle tractor truck
